

Small Patch Problem

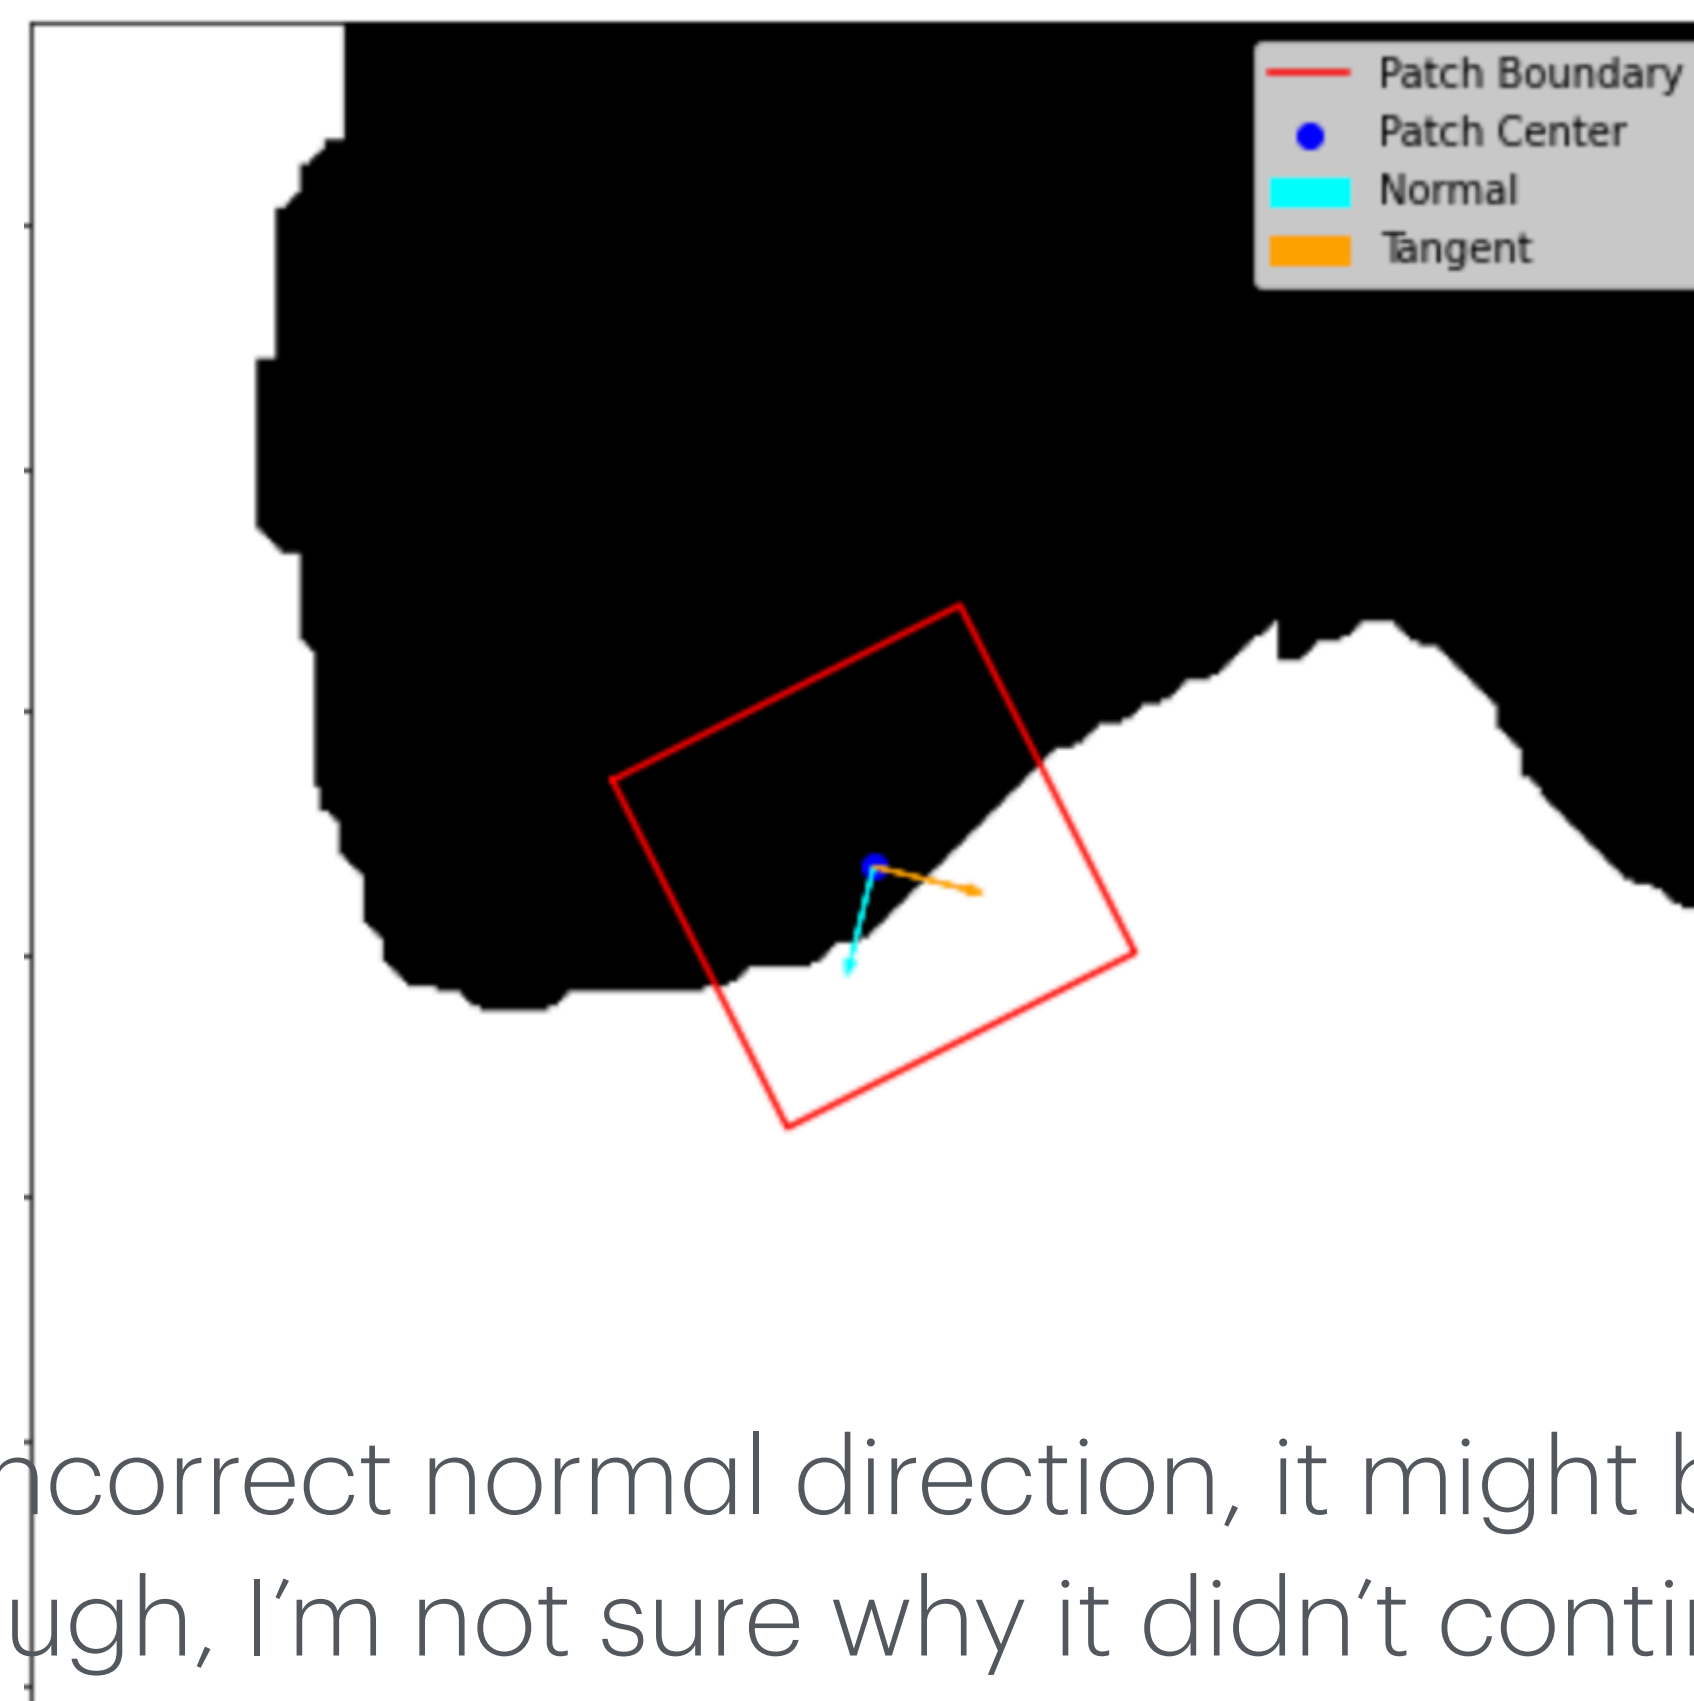

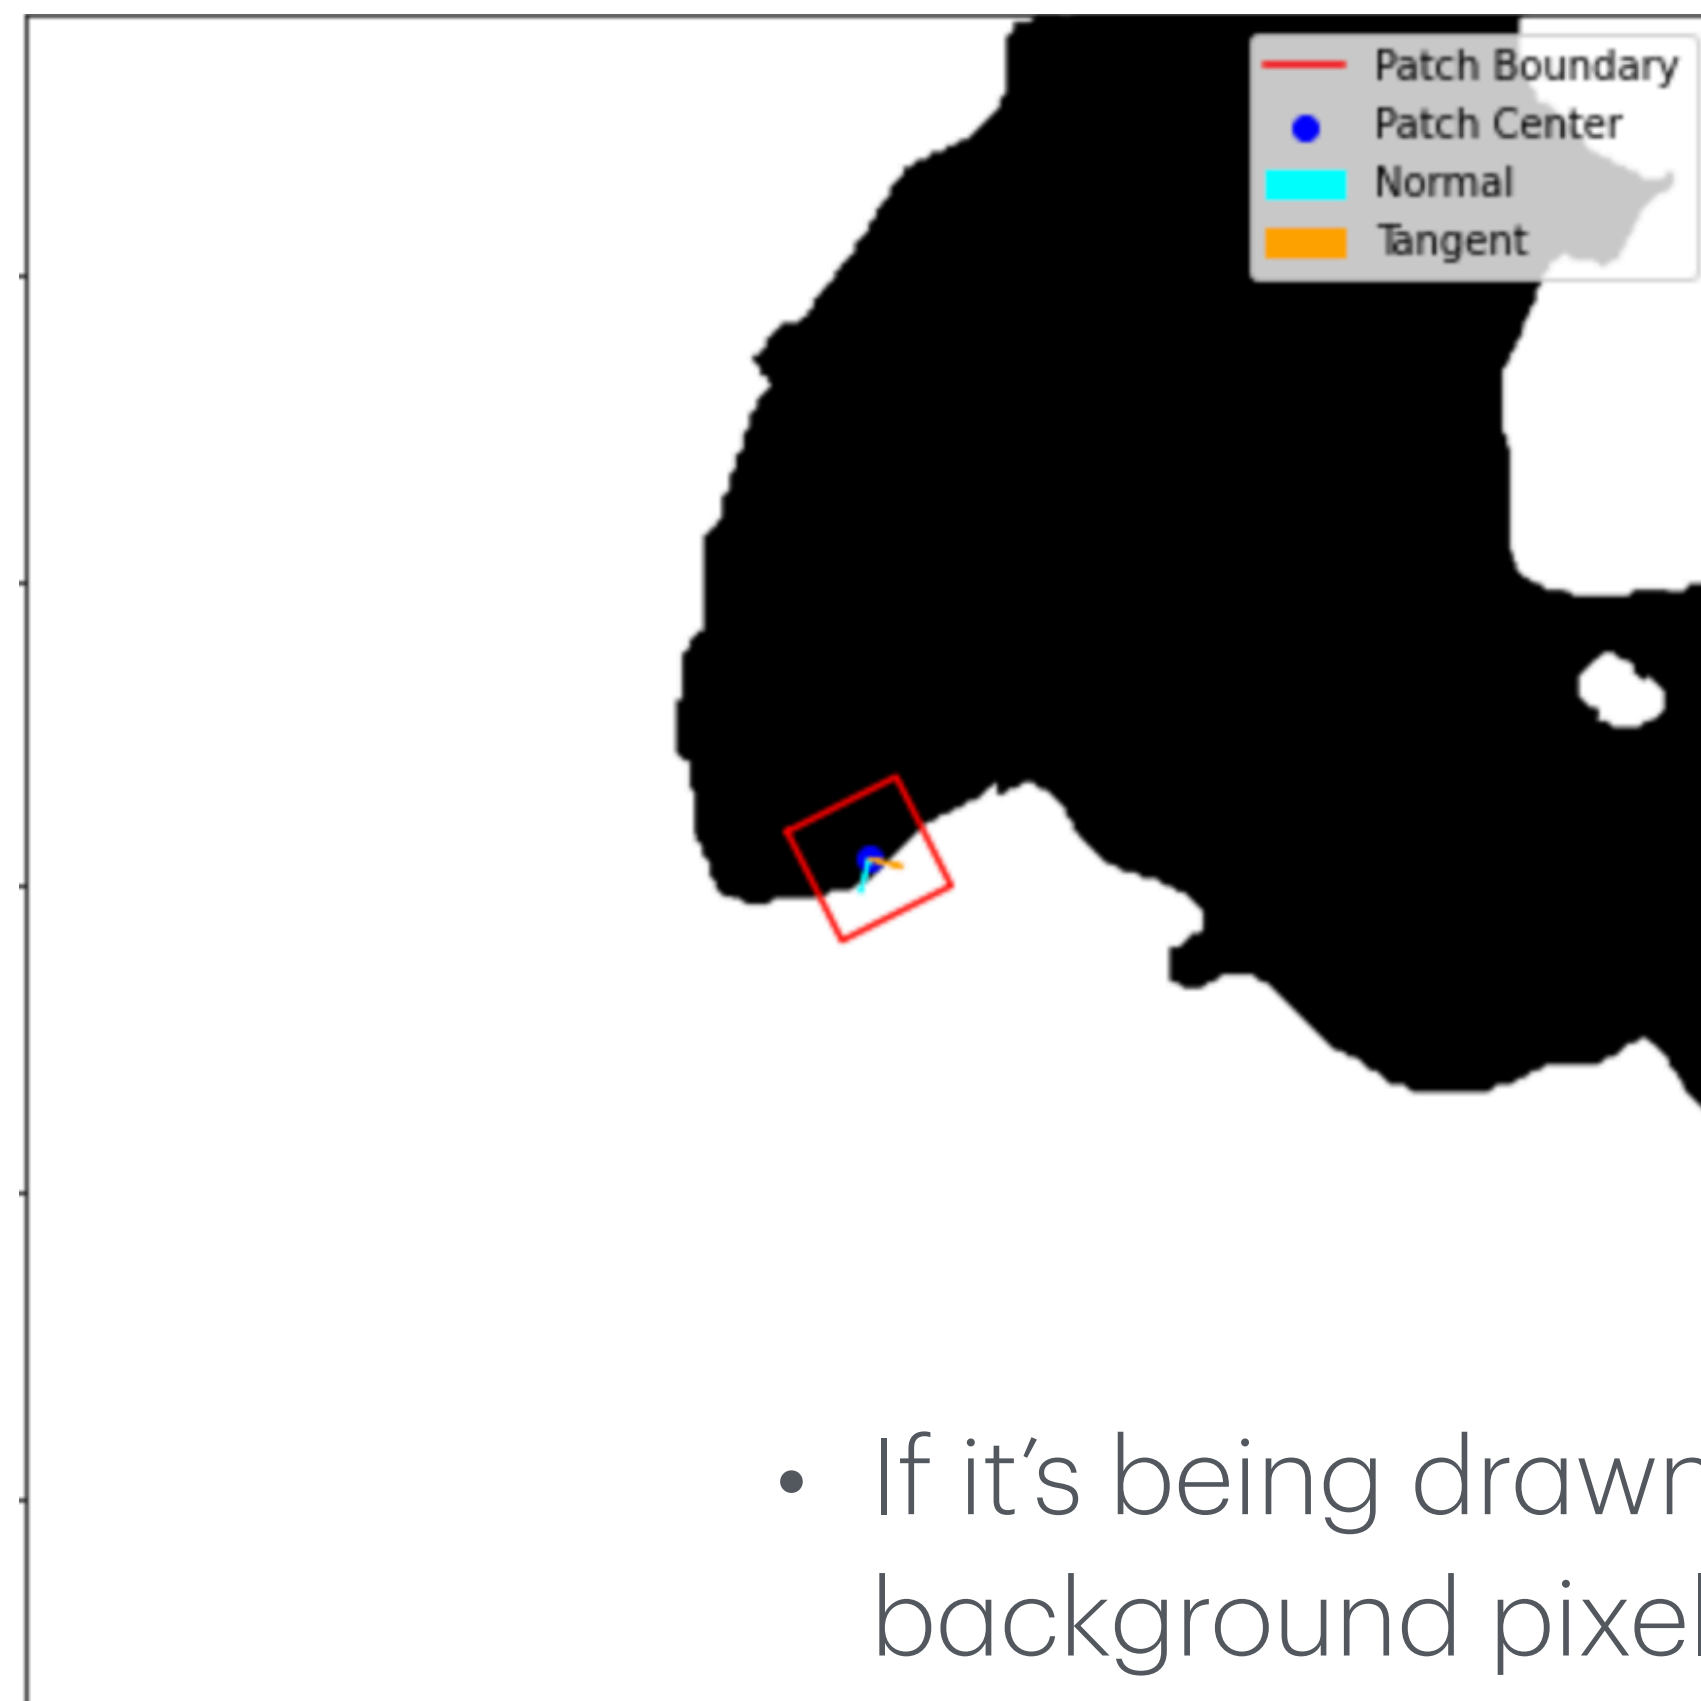

by Radhika Todi

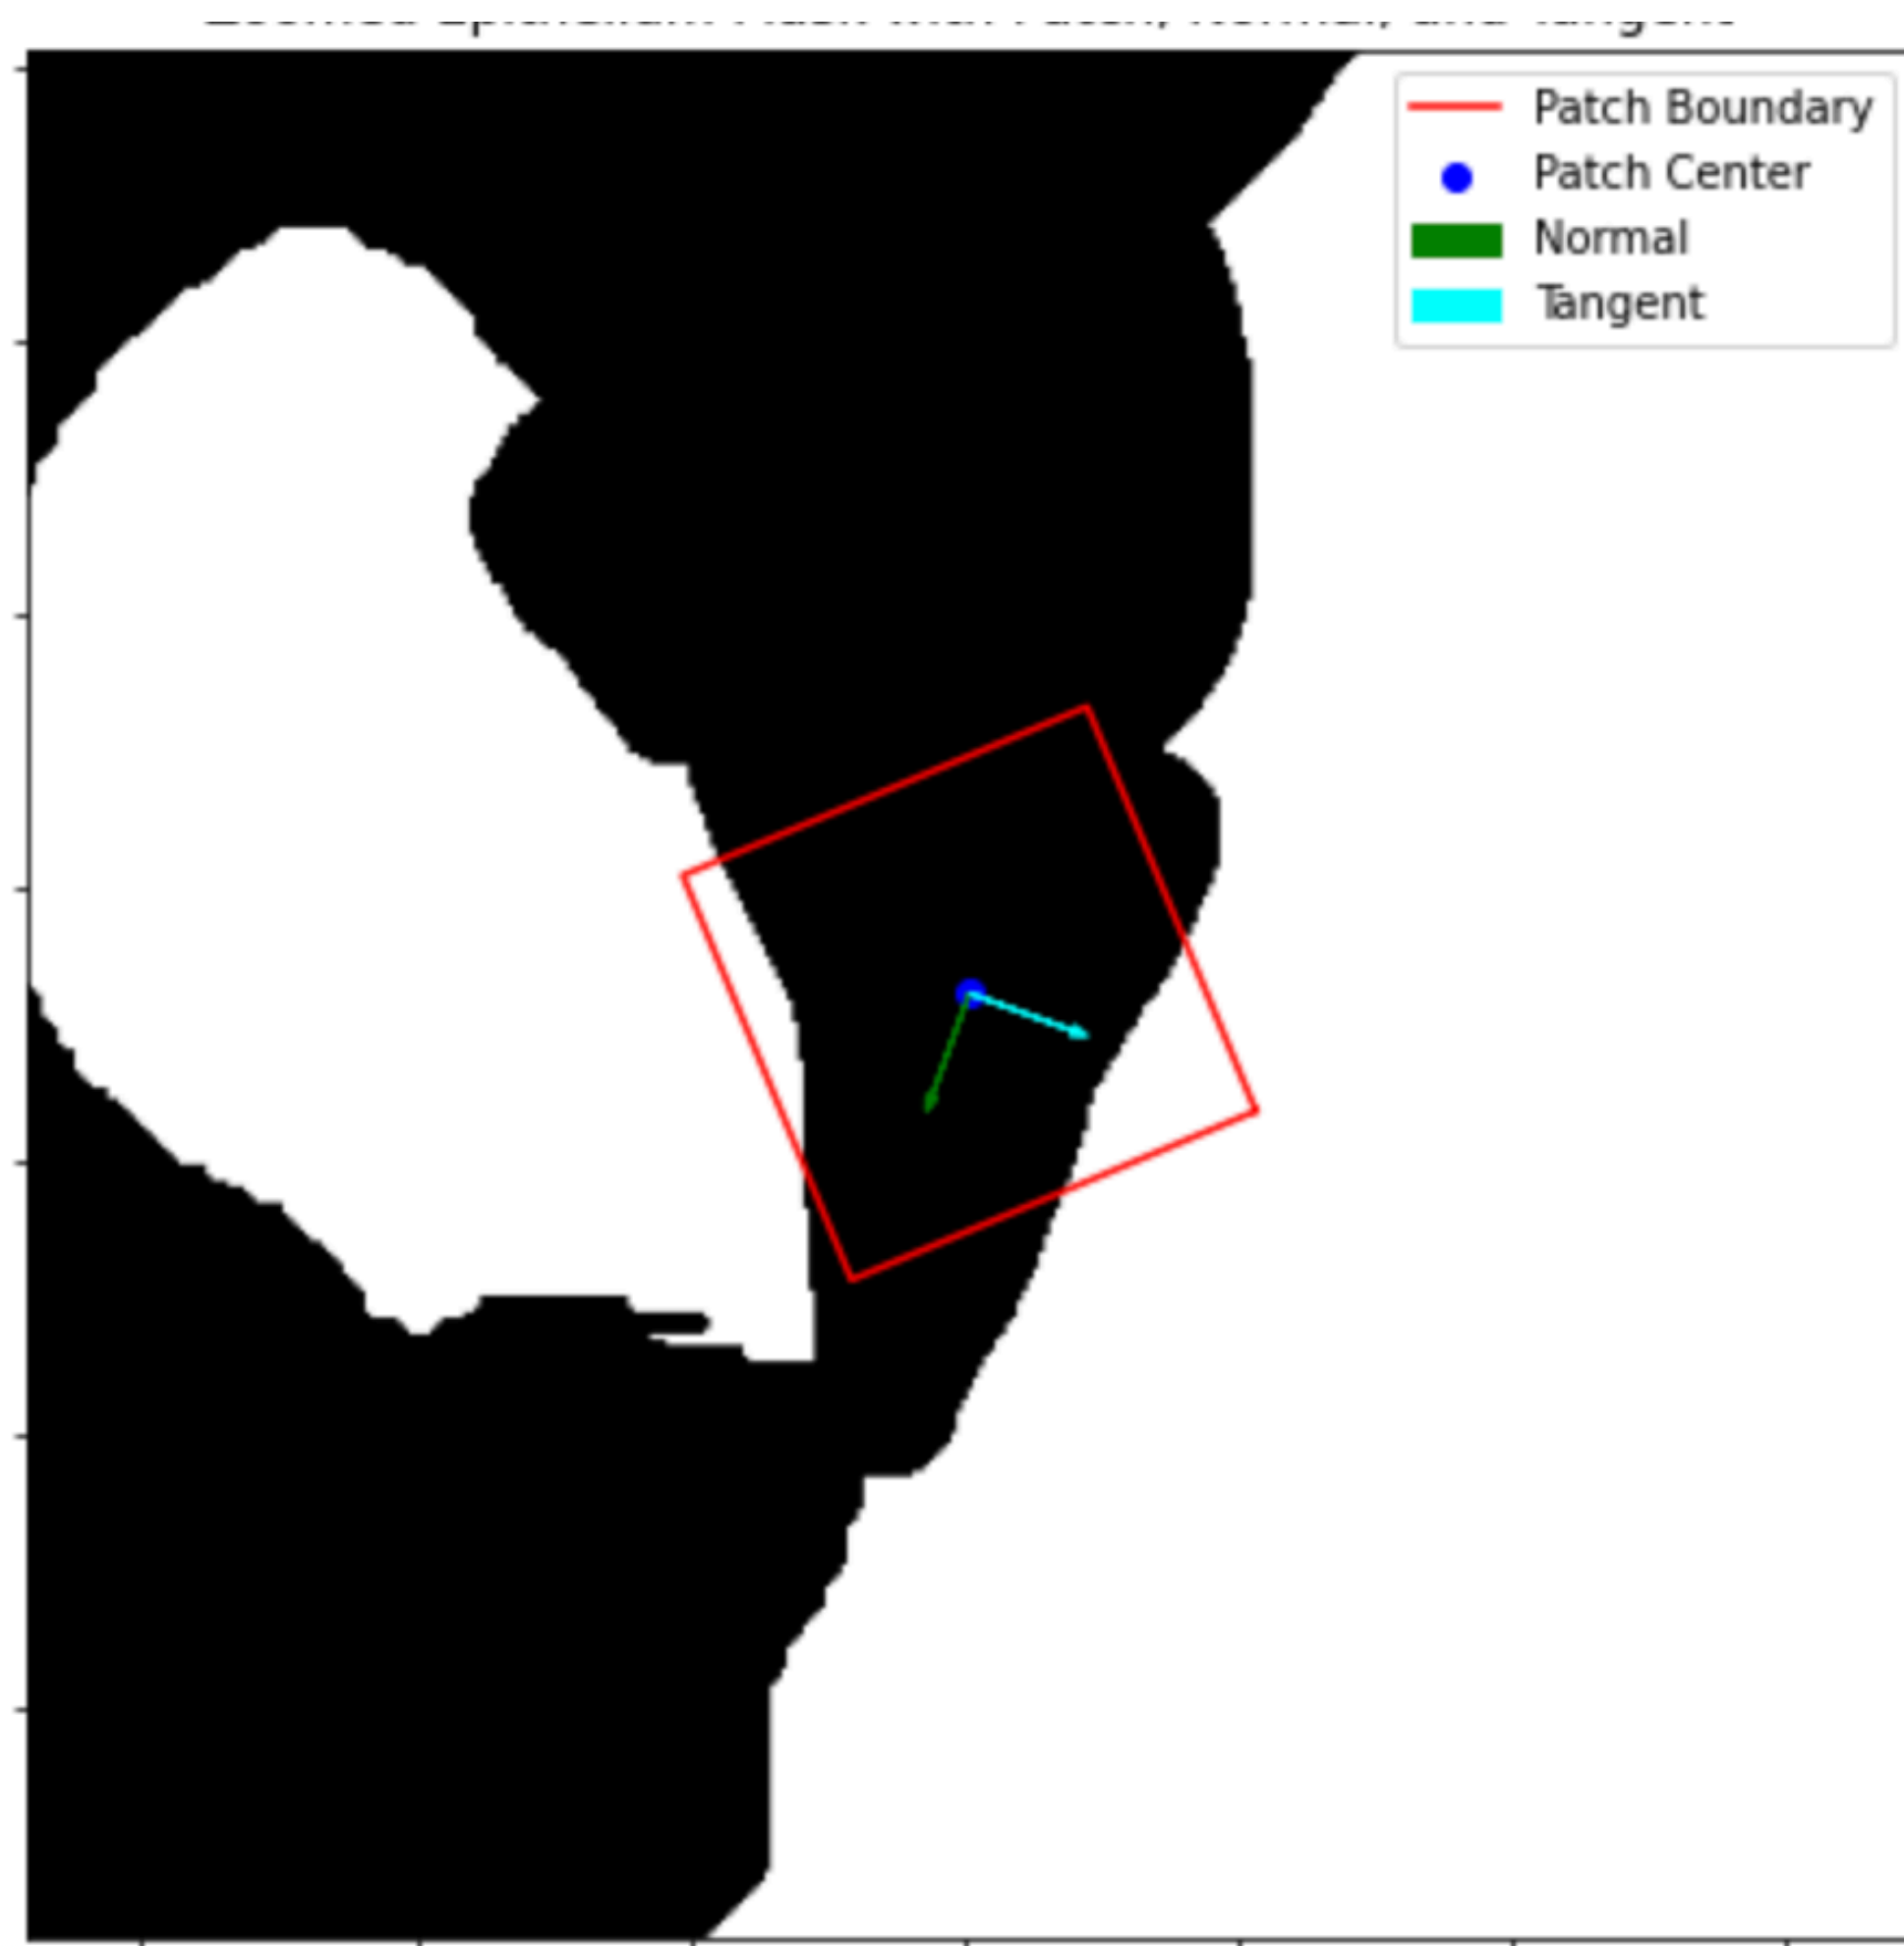

Identified Small Patch

Visualizing patch, tangent and normal

- The tangent is not aligned with the contour of the tissue
- So normal is not spanning the width of the epithelium

- If it's being drawn along an incorrect normal direction, it might be reaching a background pixel earlier, though, I'm not sure why it didn't continue extending in whichever direction it has.

A normal, correct patch

- It appears that the tangent is spanning the width of the epithelium and deciding the width of the patch
- The normal is along the contour of the tissue
